

Cardiovascular Disease Prevention and Control: Interventions Engaging Community Health Workers

Summary Evidence Table - Studies with Greatest or Moderate Suitability of Study Design

Study designs include: individual or group randomized controlled trial, non-randomized trial, prospective cohort, case-control, other design with concurrent comparison group

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Author(s): Allen et al. 2011</p> <p>Location: Maryland</p> <p>Setting(s): 2 community health centers part of the federally qualified health center entitled Baltimore Medical Systems Incorporated</p> <p>Scale: Study conducted at 2 federally qualified health centers. Of the 3899 patients screened for eligibility, 525 were enrolled in the trial and randomly assigned to the NP/CHW intervention (n=261) or the enhanced UC group (n=264)</p> <p>Design: Randomized controlled trial</p> <p>Intervention duration: 12 months</p> <p>Quality of Execution: Fair (3 limitations)</p> <p>Limitation(s): Interpretation of Results -</p>	<p>Inclusion: LDL \geq 100mg/dL OR LDL \geq 130 mg/dL if not diagnosed with CVD OR diabetes + BP > 140/90 OR >130/80 in persons with diabetes OR renal insufficiency + HbA1c \geq 7% OR glucose \geq125 mg/dL in persons with diabetes</p> <p>Exclusion: serious life-threatening non-cardiac co-morbidity OR serious physician-recorded psychiatric co-morbidity OR neurologic impairment precluding participation in their own care</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): 54.3 yrs. Sex: Male: 28.3%; Female: 71.7% Race/ethnicity: White: 20.7%; Black/AA: 79.3% Education: <H.S.: 29.1%; H.S. grad: 45.2%; some</p>	<p>CHW Activities: CHWs met with participants for a one-on-one face-to-face session followed by f/u phone calls once a month for 6 months. CHW spent time with participants solving barriers to treatment adherence and reinforced instructions related to lifestyle modifications and medication therapies previously given by the nurse practitioner. CHW assisted participants in forming a set of reminders, prompts, logs, pill organizers, and alarm clocks, etc. to help participants achieve good medication adherence.</p> <p>CHW Core Roles Met: Providing culturally appropriate information and health education + ensuring people get the services they need + providing informal counseling and social support + building individual and community capacity</p> <p>CHW Models of Care Met: Member of care delivery team + screening and health education provider</p> <p>CHW Characteristics: CHW matched to population by:</p>	<p>Blood Pressure Outcomes</p> <p>Change in SBP (mmHg)</p> <p>Baseline: Mean (SD) Intervention (n=261): 139.7 (23.8) Comparison (n=264): 138.7 (19.9)</p> <p>12 Months: Intervention (n=261): 130.8 (20.7) Comparison (n=264): 135.9 (20.5)</p> <p>Change in mean difference = -6.2; p=0.003</p> <p>Change in DBP (mmHg)</p> <p>Baseline: Mean (SD) Intervention (n=216): 83.0 (12.7) Comparison (n=264): 82.3 (13.0)</p> <p>12 Months: Intervention (n=261): 77.4 (12.5) Comparison (n=264): 79.7 (12.6)</p> <p>Change in mean difference = -3.1; p=0.013</p> <p>Cholesterol Outcomes</p> <p>Change in Total cholesterol (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=261): 199.7 (46.0) Comparison (n=264): 191.3 (45.0)</p> <p>12 Months: Intervention (n=261): 172.7 (44.5) Comparison (n=264): 184.1 (41.9)</p> <p>Change in mean difference = -19.7; p<0.001</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>proportion of patients with CVD events compared to those without CVD events are not provided + intervention and comparison group not comparable for total cholesterol and A1c at baseline + possible contamination as physicians saw patients from both the intervention and comparison group</p> <p>Funding: NIH, National Heart, Lung, and Blood Institute</p> <p>Applicability: For this study, mainly to female adults with Medicare or Medicaid receiving care for CVD risk factors by a nurse practitioner-CHW team at a federally qualified health center</p>	<p>college: 25.7%</p> <p>Low income: 52.5%</p> <p>Medicaid/Medicare: 40.6%</p> <p>No health insurance: 16.5%</p> <p>Unemployed: 57.9%</p> <p>Reported Risk Factors [Intervention Participants]: Co-morbidity Score: mean (SD): 1.6 (1.3)</p>	<p>NR</p> <p>Payment: NR</p> <p>Educational background: NR</p> <p>Years of experience: study states that CHWs had prior experience working with underserved minority populations</p> <p>Supervisor: nurse</p> <p>CHW performance evaluation: A quality assurance plan was in place to assure adherence to study protocol. Treatment algorithms were also used to promote intervention integrity</p> <p>Recruitment: NR</p> <p>Training: CHWs were trained in disease pathophysiology of CHD and diabetes, and therapeutic lifestyle management approaches of nutrition and physical activity. They were also trained in motivational interviewing and behavior change techniques</p> <p>Other provider(s): nurse practitioner + physician</p> <p>Other provider(s) activities: Nurse practitioners (NP) oversaw the initial patient assessment and tailored the intervention plan, conducted the intervention including lifestyle modification, counseling, medication titration, and prescribing medications, and consulted with the physician and supervised the CHW.</p> <p>Community Partners Involved: community-provider advisory</p>	<p>Change in LDL-C (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=261): 121.6 (40.0) Comparison (n=264): 116.3 (40.5)</p> <p>12 Months: Intervention (n=261): 100.1 (39.2) Comparison (n=264): 110.6 (36.8)</p> <p>Change in mean difference = -15.9; p<0.001</p> <p>Change in HDL-C (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=261): 50.8 (14.7) Comparison (n=264): 50.9 (13.6)</p> <p>12 Months: Intervention (n=261): 49.4 (13.5) Comparison (n=264): 49.9 (12.9)</p> <p>Change in mean difference = -0.4; p=0.497</p> <p>Change in triglycerides (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=261): 138.1 (93.4) Comparison (n=264): 126.8 (71.5)</p> <p>12 Months: Intervention (n=261): 121.3 (81.6) Comparison (n=264): 123.1 (72.2)</p> <p>Change in mean difference = -16.3; p=0.013</p> <p>Diabetes Outcomes</p> <p>Change in A1c (%)</p> <p>Baseline: Mean (SD) Intervention (n=261): 8.9 (2.2) Comparison (n=264): 8.3 (1.9)</p> <p>12 Months: Intervention (n=261): 8.3 (2.2) Comparison (n=264): 8.2 (2.1)</p> <p>Change in mean difference = -0.50; p=0.034</p> <p>Additional Outcomes: N/A</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
		<p>committee was formed including: other consumers and patients + physicians + nurses + community outreach workers</p> <p>Comparison Group: Participants in the comparison group received their baseline lipids, BP, and HbA1c measures along with the recommended goal levels. They also received a pamphlet on controlling risk factors from the American Heart Association. Providers also received copies of the American Heart Association/American College of Cardiology Guidelines for Secondary Prevention</p>	<p>Summary: Significant reductions in SBP, DBP, total cholesterol, LDL-C, triglycerides, and A1c were observed in participants who received care for CVD risk factors by a nurse practitioner-CHW team. A non-significant reduction in HDL was also observed.</p>
<p>Author(s): Balcazar et al. 2010</p> <p>Location: Texas</p> <p>Setting: non-academically affiliated primary care center: Centro San Vicente (CSV), El Paso, TX</p> <p>Scale: Ten U.S. Census tracts; Eligible: 568 people; agreed to participate: 407, Baseline: 328 (81%) were measured at baseline (192 in the experimental group and 136 in the control group) Follow-up: 284 were measured at follow-up (158 in the experimental group and 126 in the control group); Retention rate: 87% + 3 promotores</p>	<p>Inclusion: Hispanic + aged 30 to 75 yrs. + have at least one self-reported risk factor for CVD (smoking, overweight or obese, diabetes, hypertension, or high cholesterol)</p> <p>Exclusion: Pregnancy OR, having a history of CVD, OR not planning to stay in El Paso for the remainder of the study</p> <p>Reported Baseline Demographics [Intervention Arm]: Age (mean): 53.5 yrs. Sex: Male: 25.0%; Female: 75.0% Race/ethnicity: Hispanic: 100%</p>	<p>CHW Activities: CHW delivered the salud para su corazon curriculum a user-friendly, bilingual program for promotoras developed by NHLBI specifically for Latino communities. The program included information on hypertension, high cholesterol, diabetes, and heart healthy behaviors. One-on-one telephone sessions and group sessions were offered weekly for 2 hours per session.</p> <p>CHW Core Roles Met: providing culturally appropriate information and health education + ensuring people get services they need + building individual and community capacity</p> <p>CHW Models of Care Met: screening and health education provider</p>	<p>Blood Pressure Outcomes</p> <p>Proportion with BP at goal (%)</p> <p>Baseline: Intervention (n=192): 71% Control (n=136): 57%</p> <p>4 Months: Intervention (n=192): 80.5% Comparison (n=136): 77.5%</p> <p>Absolute pct pt change: -11.0; 95% CI: -19.8, -2.3</p> <p>Change in SBP (mmHg)</p> <p>Baseline: mean (SD) Intervention (n=192): 137.2 (21.8) Comparison (n=136): 141.4 (20.5)</p> <p>4 Months: Intervention (n=158): 132.6 (19.4) Comparison (n=126): 130.5 (16.7)</p> <p>Change in mean difference: 6.3; p=0.2</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Design: Group randomized controlled trial</p> <p>Intervention duration: 4 months</p> <p>Quality of Execution: Good (1 limitation)</p> <p>Limitation(s): Interpretation of Results - significant differences between intervention and comparison groups at baseline for birthplace and language spoken</p> <p>Funding: National Center for Minority Health Disparities (NIH)</p> <p>Applicability: For this study, mainly to low-income, Hispanic/Latino women receiving the Salud Para Su Corazon curriculum via group sessions at a primary care clinic</p>	<p>Education (mean): 9.7 yrs.</p> <p>Low income: 75% (<\$20,000)</p> <p>No Health Insurance: 44.0%</p> <p>Unemployed: NR</p> <p>Reported Risk Factors [Intervention Arm]:</p> <p>High SBP: 37.0%</p> <p>High DBP: 21.0%</p> <p>Diabetes: 35.0%</p> <p>Smoking: 27.0%</p> <p>BMI (mean): 31.7 kg/m² (obese)</p>	<p>CHW Characteristics: CHW matched to population by: Language + race/ethnicity + Location</p> <p>Payment: Promotores were paid</p> <p>Educational background: NR</p> <p>Years of experience: Unclear; study states that promotores in this study previous experience but length was not reported</p> <p>Supervisor: NR</p> <p>CHW performance evaluation: NR</p> <p>Recruitment: Promotores recruited via existing paraprofessionals</p> <p>Training: Received training via didactic lecture on Su Corazon Su Vida curriculum hypertension, hyperlipidemia, and diabetes</p> <p>Other provider(s): N/A</p> <p>Other provider(s) activities: N/A</p> <p>Community Partners Involved: (CBPR approach used) University of Texas at El Paso + the UT School of Public Health + El Paso Community College + priest + clinics + CHW network organizations + police chief + influential business people + parent liaison of an elementary school</p> <p>Comparison Group: Those assigned to the control group</p>	<p>Change in DBP (mmHg)</p> <p>Baseline: mean (SD) Intervention (n=192): 80 (10.9) Comparison (n=136): 89.4 (16.3)</p> <p>4 Months: Intervention (n=158): 79.8 (9.3) Comparison (n=126): 75.5 (10.6)</p> <p>Change in mean difference: 13.7; p<0.001</p> <p>Cholesterol Outcomes</p> <p>Change in Total Cholesterol (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=192): 197.5 (48.5) Comparison (n=136): 190.5 (38.5)</p> <p>4 Months: Intervention (n= 158):189.5 (54.5) Comparison (n=126): 195.2 (42.7)</p> <p>Change in mean difference = -12.7; p=0.03</p> <p>Change in LDL (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=192): 127.6 (36.2) Comparison (n=136): 120.2 (31.9)</p> <p>4 Months: Intervention (n= 158):118.6 (37.8) Comparison (n=126): 123.0 (33.8)</p> <p>Change in mean difference = -11.8; p=0.2</p> <p>Change in HDL (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=192): 40.6 (11.2) Comparison (n=136): 42.6 (10.7)</p> <p>4 Months: Intervention (n= 158):41.6 (10.2) Comparison (n=126): 41.5 (11.2)</p> <p>Change in mean difference = 2.1; p=0.98</p> <p>Change in Triglycerides (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=192): 134.7 (71.5)</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
		<p>were given basic educational materials from the "Your Heart, Your Life" curriculum at the baseline assessment. For analysis: Patients with hypertension, n=223 (113 cases and 110 controls); Patients with diabetes, n</p> <p>Design: Case-control</p> <p>Intervention duration: 18 months</p> <p>Quality of Execution: Fair</p>	<p>Inclusion: BP \geq160 and \geq100 mm Hg and a recent BP reading measured at least 12 months following appearance on a population health management (PHM) report + HbA1c \geq 9.0% or more with a recent HbA1c result measured at least 12 months following appearance on a PHM report.</p> <p>Exclusion: NR</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): 65.6 yrs. Sex: Male: 34.82% Female: 66.07% Race/ethnicity: NR; but mostly Asian and Pacific Islanders Education: NR</p>	<p>CHW Activities: Provided one-on-one education and counseling sessions via telephone from the ICHS federal clinic. EHRs/EMRs were also kept and collected.</p> <p>CHW Core Roles Met: Bridging/cultural mediation between community and healthcare system + providing culturally appropriate information and health education + ensuring people get services they need</p> <p>CHW Models of Care Met: Member of care delivery team + navigator + screening and health education provider + outreach/enrollment/information agent</p> <p>CHW Characteristics: CHW matched to population by: Language Payment: NR Educational background: NR</p>	<p>Blood Pressure Outcomes</p> <p>Proportion with BP at goal (%)</p> <p>Baseline: Intervention (n=223): 0% Comparison (n=223): 0%</p> <p>F/u Not Reported: Intervention (n=223): 35.4% Control (n=223): 17.5%</p> <p>Absolute pct pt change = 17.9; 95% CI: 9.9 to 25.9</p> <p>Diabetes Outcomes</p> <p>Proportion with A1c at goal (%)</p> <p>Baseline: Intervention (n=141): 0% Control (n=141): 0%</p> <p>F/u Not reported: Intervention (n=71): 64.8% Intervention (n=70): 58.7%</p> <p>Absolute pct pt change = 6.2; 95% CI: -9.8 to 22.2</p> <p>Change in HbA1c (%)</p> <p>Baseline: Mean (SD) Intervention (n=141): 10.5 (NR) Control (n=141): 10.6 (NR)</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>(3 limitations)</p> <p>Limitation(s): Measurement - Use of EHR for information, however lack of knowledge on use of EHRs, may have resulted in errors in data entry</p> <p>Interpretation of Results – Intervention and control groups significantly different at baseline for insurance and language + intervention targeted to patients with greatest need for improvement possibly biasing the results</p> <p>Funding: David E. Rogers Fellowship Program of the New York Academy of Medicine</p> <p>Applicability: For this study, mainly to older adult females with high blood pressure and diabetes receiving one-on-one telephone sessions with CHWs and additional care and services from a primary care physician, nutritionist, health educator, and pharmacist for management of these conditions.</p>	<p>Low income: NR</p> <p>Public or private insurance: 80.9%</p> <p>Unemployed: NR</p> <p>Reported Risk Factors [Intervention Participants]: Risk factor status not reported</p>	<p>Years of experience: NR</p> <p>Supervisor: NR</p> <p>CHW performance evaluation: NR</p> <p>Recruitment: Existing paraprofessional navigators were already employed in the clinic</p> <p>Training: Received population health management (PHM) training</p> <p>Other provider(s): physician + nutritionist + health educator + pharmacist</p> <p>Other provider(s) activities: Medication management consultation with pharmacist; Potential appointments/services with primary care physician, pharmacist, health educator, or nutritionist; Consultation on health education, nutrition and lifestyle from nutritionist and health educator. Follow-up with their primary care providers encouraged (PCPs).</p> <p>Community Partners Involved: N/A</p> <p>Comparison Group: Controls did not receive or refused a PHM intervention. Documentation in the PHM reports and/or the EHR was used to determine whether PHM interventions were offered, received, or refused.</p>	<p>F/u Not reported: Intervention (n=71): 8.2 (NR) Intervention (n=70): 9.2 (NR) Change in mean difference = -0.88; p=0.0074</p> <p>Additional Outcomes: N/A</p> <p>Summary: There was a significant increase in the proportion of participants with BP controlled as well as an increase in the proportion of participants with A1c controlled at goal. There was a small but significant reduction in HbA1c levels.</p>

Abbreviations:

BMI, body mass index

CI, confidence interval

DBP, diastolic blood pressure

DBP, diastolic blood pressure

HDL, high density lipoprotein

kg/m², kilograms per meters squared

LDL, low density lipoprotein

mg/dl, milligrams per deciliter

mmHg, millimeters of mercury

NR, not reported

SBP, systolic blood pressure

SD, standard deviation
